- Review

Cornell Notes

October 3

Types of Leadership Theory

Cue Column

Pg. 127

Pg. 122

Why do some believe in Theory X and others Theory Y?

Motivational Theories -
- Explain how human relations affect motivation.

Note-Taking Area

Maslow's Hierarchy of needs (motivational theory)

1. Physiological Needs - survival, food, shelter
2. Security Needs - stability and protection
3. Social Needs - friendship and companions
4. Esteem Needs - status and recognition
5. Self-Actualization - self-fulfillment

- * Developed By Abraham Maslow
- * Must meet lower needs first.

Theory X - holds that people are naturally irresponsible.

Theory Y - holds that people are naturally self-motivated and responsible.

- * Developed by Douglas McGregor
- * What type of leader you are is determined by which theory you believe in.

Motivational theories explain how and why people are motivated. 2 motivational theories are Maslow's hierarchy of needs and Theory X and Y

Use AI Appropriately (if at all)

AI and Large Language Models

Does ChatGPT make people more dumb, because they outsource all their thinking?

That's a fair and important question—and it's being actively debated.

The concern:

Yes, there's a real risk that if people **over-rely** on ChatGPT or similar tools, they may:

- **Stop practicing critical thinking**, problem-solving, or independent writing.
- Default to **copy-paste answers** rather than understanding concepts deeply.
- Accept information without question, especially if it's packaged well.

This kind of passive use **can erode cognitive skills** over time—just like using a calculator for every little thing might weaken your mental math.

AI and Large Language Models

But it doesn't have to go that way:

Used intentionally, ChatGPT can actually **make you smarter** by:

- Acting as a **sounding board** to clarify your thoughts.
- Offering **different perspectives** or ideas you hadn't considered.
- Helping you **learn faster** by breaking down complex ideas.
- Letting you test and refine your own reasoning by comparing it to an alternative.

It's kind of like Google, Wikipedia, or even books: they **can be tools for learning**, or they can be shortcuts that undermine it—it depends **how** you use them.

So, what's the difference between smart use and dumb use?

Smart Use	Dumb Use
Asking for explanations, then reflecting or researching further	Blindly copying answers
Using ChatGPT to test your understanding or debate ideas	Letting it do all the work
Treating it like a collaborator or tutor	Treating it like a crutch

Take Care of Yourself

Make yourself a schedule and stick to it

Take care of your mind and body

- Sleep,
- Diet
- Exercise
- Life balance
